Example 1; Fig 1A-P; 158pp; English.

CC This 2918 bp cDNA sequence encodes CRAFI (TRAF-3) and its deletion CC and alternative splice isoforms (see W27428-37). It is derived CC from several cDNA species from a Raji B cell library. CRAFI CC acids encoding them, can be used to inhibit CD40 ligand activation of cells that express CD40 on their surface, particularly by CC introducing the nucleic acid molecule into the cells, useful to of cells that express CD40 on their surface particularly by CC treat conditions characterised by an aberrant or unwanted level of CC treat conditions characterised by an aberrant or unwanted level of CC a subject receiving transplant organs, or a CD40 dependent inmune crapponse in a subject receiving gene therapy. The condition may be can allergic response, an autoimmune response, or may be dependent on CD40 ligand-induced activation of epithelial cells, an inflammatory kidney disease, a smooth muscle cell-dependent conclicic acids can also be used as probes in diagnostic testing. The gene for CRAFI is located on human chromosome 14932.2.

                                                                                                                                                                                                 Example 1; Page 58-60; 87pp; English.

A DNA sequence (T31273) codes for a novel B-cell protein (W03146) termed LMP1 associated protein 1 or LAP1, which strongly associates with the cytoplasmic C-terminal domain (W03148) of Epstein Barr virus (EBV) latent infection membrane protein 1 (LMP1), a domain that is stringently required for transformed cell growth. LAP1 is related to murine tumour necrosis factor receptor associated factor TAFF2. The gene was identified using a yeast 2-hybrid screen. It can be used in gene was identified using a yeast 2-hybrid screen. It can be used in transduction, or for the prodn. of LAP1 polypeptides that inhibit controlling cell growth/tumourigenesis associated with LMP1-encoding viruses, partic. EBV.

mew CD40 associated protein, agonists and antagonists - used to PT modulate cell proliferation, immune response, apoptosis etc., e.g. PT for treating cancer or autoimmune disease PS Claim 13; Fig 1; 94pp; English.

CC This DNA encodes a CD40 associated protein (CAP)-1. The CAP is a protein that specifically binds to CD40, a cell surface receptor involved in capoptosis. Agonists and antagonists of CAP can increase or decrease CC the level of CAP expression in a cell and can thereby modulate the cluction of the cell. Such compounds can be used to treat cancer, autoimmune diseases like asthma, hay fever, rheumatoid arthritis and can tended diseases and neurodegeneration. Antibodies that bind specifically to CAP can be used to assay CAP, to detect pathologically CC altered levels. This nucleic acid can be used to identify related genes and to express CAP for gene therapy.

The TRAF5 protein has a colled-coll domain, a leucine zipper motif and binds to lymphotoxin beta receptor and to CD30, but n to CD40 or TNF receptor 2. TRAF5 and its corresponding DNA are useful the investigation of the signal transducer system of the TNF receptor family and the functions of TRAF proteins. They can also be used as probes for research and diagnostic purposes, and investigation of the specific applications of potential therapeutic agents.

Disclosure; Pages 49-52; 69pp; Japanese.
The present sequence encodes a novel protein, designated TRAF5, which a member of the tumour necrosis factor (TMF) receptor associated factor family. The TRAF5 protein has a coiled-coil domain, a leucine zipper motif and binds to lymphotoxin beta receptor and to CD30, but n to CD40 or TMF receptor 2. TRAF5 and its corresponding DNA are useful the investigation of the signal transducer system of the TMF receptor family and the functions of TRAF proteins. They can also be used as probes for research and diagnostic purposes, and investigation of the specific applications of potential therapeutic agents.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence encodes human TRAF5 a protein of the tumour necrosis factor (TMF) receptor associated factor family. TRAF5 products can be used in immunisation, to treat allergies and as cell proliferation inhibitors. They can also be used to screen frakf5 inhibitors or regulators.

A DNA sequence (731274) codes for a novel B-cell protein (W03147) induced by Epstein-Barr virus (EBV) infection, termed Epstein-Barr induced protein 6 or EBI6. The protein appears to be the human homologue of murine tumour necrosis factor receptor (TNFR) associated factor TRAFI. The gene can be used in gene therapy protocols for controlling TRAF-mediated TRMF/TNFR signal transduction, or for the prodn. of EBI6 polypeptides that inhibit transduction for use in treating infection and controlling that interacting infection and controlling that the production are controlling that the production and controlling that the production are controlling that the production and controlling that the production are controlling that the production and controlling that the production are controlling that the production and controlling that the production are controlling that the production and controlling that the production are controlling that the production are controlling that the production are controlling that the production and controlling that the production are controlling that the production and controlling that the production are controlling that the production and controlling that the production are c

A cDNA clone (T12262) coding for tumour necrosis factor receptor associated factor 2 (TRAF2) (R90578) was isolated using a yeast two-hybrid system to assay for proteins that associate with the intracellular domain (ID) of tumour necrosis factor receptor type 2 (TNF-R2). The cDNA is used for prodn. of recombinant TRAF2, a new factor capable of specific association with TNF-R2 ID and CD40. sequence 2121 BP; 506 A; 560 C; 616 G; 439 T;

Example 2: Page 69-71; 116pp; English.

A CDNA clone (T12261) coding for tumour necrosis factor receptor associated factor 1 (TRAF1) (R90577) was isolated from a CDNA library pred. from the murine interleukin-2-dependent cytotoxic T-cell line CT6, using probes based on isolated peptides of TRAF1. The cDNA is used for prodn. of recombinant TRAF1, a new factor capable of specific association with the intracellular domain of the type 2 TNF receptor and CD40.

Prognosione 17 (11-q21.3 or 6 q22-q23, useful in breast cancer prognosis and as leukaemia markers

SClaim 1; File 6; 197pp; English.

CC This sequence encodes human CART1 and is deposited as ATCC 97610. The CART1 polypeptide is localised in the nucleus of breast carcinoma cells cand has 3 structural domains. A Cys-rich region is located at the CRART polypeptide is localised in the nucleus of breast carcinoma cells cand has 3 structural domains. A Cys-rich region is located at the CRART finger domain and is probably involved in protein protein binding. CRASC motifier repeats of an HC3HC3 consensus motif. This domain is constitutes three repeats of an HC3HC3 consensus motif. This domain is constitutes three repeats of an HC3HC3 consensus motif. This domain is constituted the CART motifi. The C-terminal part of the CART1 cc protein corresponds to a TRAF domain known to be involved in protein corresponds to a TRAF domain known to be involved in protein corresponds to a TRAF domain known to be involved in protein corresponds to a TRAF domain known to be involved in protein corresponds to a TRAF domain known to be involved in protein corresponds to a TRAF domain known to be involved in protein corresponds to a TRAF domain known to be involved in protein corresponds to a TRAF domain known to be involved in protein corresponds to a TRAF domain known to be involved in protein corresponds to a TRAF domain known to be involved in protein corresponds to a TRAF domain known to be involved in protein corresponds to a TRAF domain known to be involved in protein corresponds to a TRAF domain known to be involved in protein corresponds to a TRAF domain known to be involved in protein corresponds to a TRAF domain known to be involved in protein corresponds to a TRAF domain known to be involved in protein corresponds to a TRAF domain known to be involved in protein corresponds to a TRAF domain known to be involved in protein corresponds to a TRAF domain known to be involved in protein corresponds to a TRAF domain known to be invol

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          δÃ
                                                 DNA encoding tumour necrosis factor receptor associated factor 6 - useful for screening compounds, for therapy and diagnosis of immune-regulated diseases, etc.

CLaim 4; Page 11-14; 23pp; English.

This cDNA sequence includes a coding region for a novel human finish cDNA sequence includes a coding region for a novel human finish cDNA sequence includes a sociated factor six (TRAF6) cC polypeptide (see W32113), which transcriptionally activates nuclear factor kappa-B. The 2248 bp sequence was isolated from human spleen and umbilical vein endothelial cell cDNA libraries by hybridisation with TRAF oligonucleotide probes. The isolated nucleic acid is used to produce recombinant TRAF6. The recombinant protein is used in a screening method for detecting agents that modulate binding of TRAF6 to natural intracellular targets, while cells containing the TRAF6 gene are used in a screening method for detecting agents that modulate transcription of TRAF6 inducible genes. Both methods are used to identify compounds potentially useful in the diagnosis and treatment of immune-regulated diseases, e.g. infection, genetic disease and disturbed cell growth/regulation such as neoplasia, inflammation and hypersensitivity. Probes and primers able to hybridise to the cDNA sequence are used to detect TRAF6 mutations, to isolate natural TRAF6-encoding sequences, to detect TRAF6 homologues and analogues, and therapeutically to condulate cellular expression, or intracellular concentration of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Tumour necrosis factor receptor associated factor 6 (TRAF6) Tumour necrosis factor receptor associated factor 6; TRAF6; nuclear factor kappa B; immune-regulated disease; infection; genetic disease; cell growth; cancer; inflammation;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Š
PT New isoforms of Stat6 - having differential effects on the primodulation of Stat6 activity in cells Disclosure; Page 61-66; 88pp; English.

CC Disclosure; Page 61-66; 88pp; English.

CC of transcription). The invention relates to attenuated and dominant configurative isoforms of human Stat6 (signal transducers and activators of transcription). The invention relates to attenuated and dominant configurative isoforms of human Stat6. The detection and quantitation of DNA cor mank encoding Stat6 and/or Stat6b and/or Stat6c can be used to detect differential expression of Stat6 isoforms in numerous diseases, including myeloid cancer, asthma, sarcoma, scleroderma, bone marrow fibrosis, complexity complementary sequences. The genomic or cDNA libraries or to identify complementary sequences. The collection of chromosomal aberrations and translocations involving the stat6 gene. Antibodies against the isoforms can be used to detect the presence of Stat6 and/or Stat6b and/or Stat6c in a sample. Because of the crasscription the isolated and purified forms can be used to study gene regulation and in screening assays for identifying drug candidates which may be used as agonists or antagonists. The two polymeptides may also be used in gene therapy protocols. In particular, Stat6b and/or Stat6c can therapeutically modulate the development and differentiation of B and collinational stat6 with functional responses collinational stat6b when compared Stat6 is an attenuated regulator of gene collination of gene compared Stat6 is an attenuated regulator of gene collination of gene compared Stat6 is an attenuated regulator of gene collination of gene compared Stat6 is an attenuated regulator of gene collination of gen

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ACC PROPERTY OF THE PROPERTY O
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ş
                                               Translation enhancing sequences

Example 1; Pages 88-89; 108pp; English.

The present sequence was used in the preparation of a novel chimaeric gene, comprising: (a) promoter recognised by a DNA-dependent RNA polymerase other than eukaryotic RNA polymerase CI; (b) DNA sequence encoding a chimaeric RNA comprising; and 5' cuntranslated regions (UTR), plus an AU-rich heterologous coding sequence; and optionally (c) terminator recognised by the same polymerase as the promoter. The chimeric RNA is uncapped, translated in plant cell cytoplasm to form a protein and includes two translation-enhancing sequences (TES) derived from the 5' and 3' regions of (sub)genomic RNA of a positive stranded RNA plant cell cytoplasm to form a protein and includes two translation gene can be used to transform plant cells which are grown into plants that express the protein, specifically a Bacillus tharinglensis insecticidal crystal protein specifically a Bacillus centrally any protein that improves, nutritional value, imparts resistance to herbicides, pathogens or inhibits proteases, amylases or RNases. TES provide efficient cap and polyadenylation confidency while the use of a polymerase other than polyadenylation confidency that the polyadenylated RNA, whereas in current methods high yield expression of AT-rich genes is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match
